Our Idea

A tool that dynamically changes the DNS for a specific request or session to provide seamless access to websites blocked or restricted by their current DNS.

Target Market

General Internet User

- Non-technical individuals who primarily use the internet for browsing, streaming, and social media.
- Likely to encounter DNS-related access issues but lack the knowledge or inclination to manually change settings.

People in Authoritarian Regimes

- Individuals living under restrictive governments who face censorship and need tools to bypass blocked websites and access unrestricted information
- May not have technical expertise but rely heavily on the internet for communication, information, and connecting with the outside world

IT Professionals and System Administrator

- IT professionals responsible for managing network configurations across an organization or multiple devices.
- Have more technical expertise and a deep understanding of networking concepts. require automated tools to quickly resolve DNS-related downtime

Main Features:

03

User Feedback

Notifies users about the DNS change and its success

04

Ethical Content Check

Utilizes AI to analyze the website and provides a warning if the site is identified as unethical, harmful, or potentially unsafe

01

Automatic Detection

Recognizes when a website is inaccessible due to DNS issues

02

Dynamic Switching

Automatically changes the DNS to an alternative, more accessible server

Competitors:

- VPN Services with DNS Switching
 - DNS-Specific Tools
 - Public DNS Services with Automatic Switching
 - Internet Access Tools for Bypassing Restrictions
 - System-Level DNS Management Tools
-

Our Competitive Edge:

- ✓ Dynamic DNS Switching for Specific Use
- ✓ Fully automated detection
- ✓ Zero technical knowledge required
- ✓ Cross-platform compatibility
